SUMMARY

Python developer with internship experience building and shipping full-stack applications — REST APIs with FastAPI, Flask, and Django, React.js frontends, and Dockerized deployments. Comfortable working across the stack, from database design to CI/CD, and picking up new tools quickly on the job.

TECHNICAL SKILLS

Languages & Frontend: Python, JavaScript, React.js, HTML5, CSS3, Tailwind CSS, Axios, React Router

Backend: Django, FastAPI, Flask, Pydantic, SQLAlchemy, REST APIs, Microservices, RBAC, JWT Authentication

Database: MySQL, PostgreSQL, MySQL Workbench

API & Testing: Postman, Swagger/OpenAPI, Pytest, JUnit, Mockito

Data & BI: Tableau, Power BI, Data Cleaning

DevOps & Practices: Docker, Docker Compose, Git, GitHub Actions, CI/CD, Agile, Render, Vercel

INTERNSHIP EXPERIENCE

AI Intern | AppMind AI (MR.TechLab LLP)

Jan 2026 – May 2026

- Built two full-stack applications end-to-end (see Projects below), working with a small team from requirements through deployment.
- Picked up Firebase Auth, FastAPI, and Docker on the job; wrote and reviewed API docs with Swagger/OpenAPI for smooth frontend integration.

AI & Data Science Intern — Software Dev Project | Knowx Innovations (P) Ltd.

Mar 2023 – Jun 2023

- Built and evaluated CNN-based deep learning models in Keras and TensorFlow, including a VGG16 implementation, across multiple layer configurations.
- Applied core machine learning workflows — data preprocessing, training, evaluation — as part of a guided software development project.

AI & Data Science Intern — Training | Knowx Innovations (P) Ltd.

Oct 2022 – Jan 2023

- Completed structured training in Python, SQL, machine learning algorithms, cloud computing basics, OpenCV, Keras, and TensorFlow.
- Applied statistics and linear algebra fundamentals to explore and interpret real-world datasets.

PROJECTS

Shopora — E-Commerce Website

Jan 2026 – May 2026

Tech: React.js, HTML, CSS, JavaScript, Python, FastAPI, Django, MySQL, Docker, Postman, JUnit, Mockito, JWT, CI/CD, Microservices, REST APIs, RBAC, Agile

- Built a full-stack e-commerce platform: React.js (HTML, CSS, JavaScript) frontend talking to Django and FastAPI microservices.
- Designed REST APIs with Django and Pydantic models and SQLAlchemy ORM against MySQL, with JWT-based authentication and RBAC for role-based access control.
- Documented and tested the API surface with Postman, and wrote JUnit/Mockito test cases alongside Pytest for backend coverage.
- Set up Docker and GitHub Actions CI/CD pipelines so every push deployed a consistent build, following Agile sprint practices with the team.

Digital Analytics Dashboard

Jan 2026 – May 2026

Tech: Python, Flask, HTML, CSS, JavaScript, PostgreSQL, Firebase, Google Authentication, Gemini API, Postman, Docker, JUnit, JWT

- Built a Flask dashboard backed by PostgreSQL that ingests CSV data and turns it into charts and summary views; added Google/JWT-based sign-in via Firebase, Gemini API insights, and Docker packaging.
- Tested API endpoints with Postman and JUnit, and containerized the app with Docker for consistent deployment.

Personal Portfolio Website

Tech: React.js, Axios

- Designed and built a responsive portfolio site with a component-based structure, deployed on Vercel.

CERTIFICATIONS

- Data Analytics Training — Tableau, Power BI, Data Cleaning
- Green Skills and Artificial Intelligence — Skills4Future Program, Edunet Foundation, AICTE & Shell India Markets Pvt. Ltd.
- Python Full Stack Development — Qspiders

EDUCATION

B.E. in Computer Science & Engineering

2026

ACS College of Engineering, Bengaluru | CGPA: 8.00 / 10
